reactive carboxyl group; R3 = cholesterol biosynthesis inhibitor with at least one free and reactive hydroxyl group; R4 = derived from ascorbic acid; X = H, Biol. acceptable metal, alk. earth metal; n = 1-5], including salts, solvates and prodrugs of thereof in treating or preventing cardiovascular disease and other disorders. In another aspect, the present invention provides compns. comprising at least one sterol and/or stanol ester and at least one cholesterol biosynthesis inhibitor. Also provided are methods of treating or preventing a variety of diseases, conditions and disorders by administering the compds. or compns. provided herein.

AB According to the invention, there is provided a phosphate derivative of a compound having a secondary hydroxy group. The compound having a secondary hydroxyl group may, for example, be chosen from pravastatin, atorvastatin, venlafaxine, their derivs. and mixts. thereof. Phosphate derivative of atorvastatin was prepared by the reaction of free acid of atorvastatin with P2O10 in presence of sodium valerate.

OTHER SOURCE(S): MARPAT 140:259095  
 AB A composition comprises the reaction product of 1 or more phosphate derivs. of 1 or more hydroxylated drugs and (b) 1 or more complexing agents selected from the group consisting of amphoteric surfactants, cationic surfactants, amino acids and proteins rich in these amino acids. Disodium tocopheryl phosphate was dissolved in water and arginine-HCl was added and the mixture was intimately mixed for 1 h. The mixture increased in viscosity until a gel was formed indicating that a reaction had occurred. The complex product was then analyzed by electrospray mass spectrometry. The spectrum showed peaks at 510 (tocopheryl phosphate) and 683 (tocopheryl phosphate arginine complex) mass units. The 683 peak indicates the bond between arginine and tocopheryl phosphate survived the intense accelerating field and thus is very strong.
